ThreadFix vulnerability management platform

Efficiently identify and remediate vulnerabilities

The industry's leading vulnerability management platform, ThreadFix provides a complete view of your risk from applications and their supporting infrastructure. By centralizing test and vulnerability data in one place, your security team can spend less time on manually correlating results and more time focused on higher-level risk decisions on software security. In fact, companies that use ThreadFix report more than a 40% reduction in time to fix vulnerabilities.
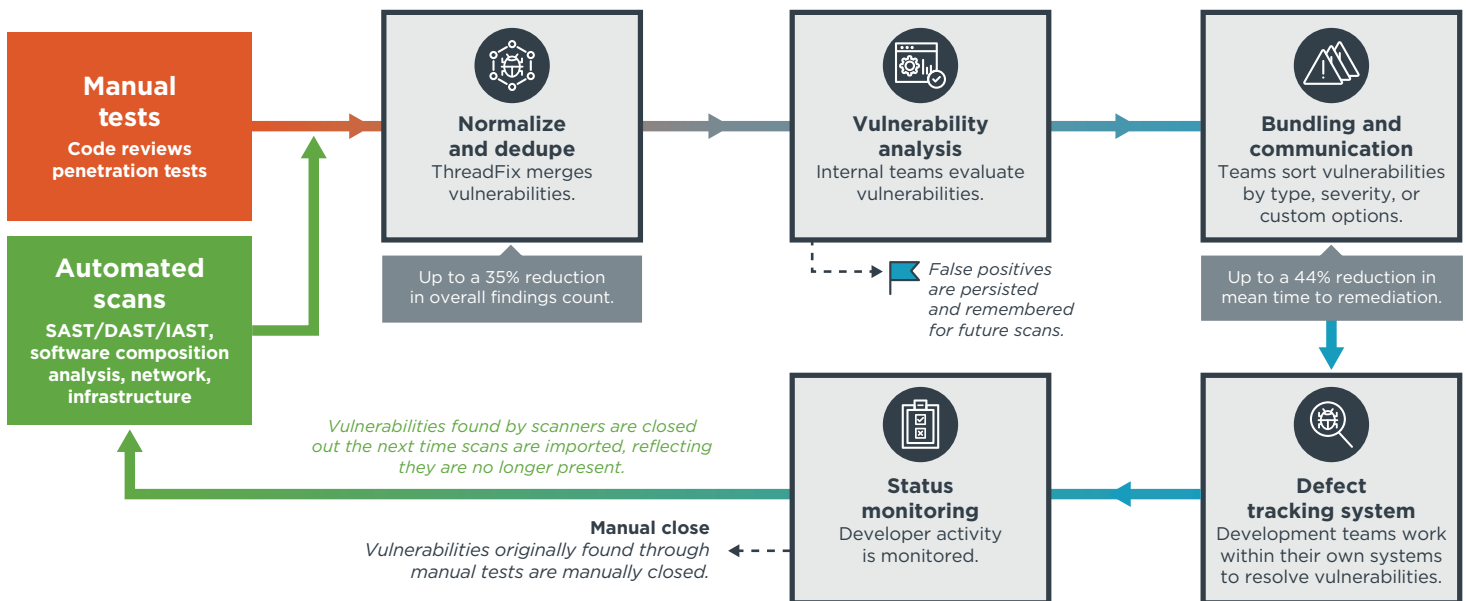

CONSOLIDATE TEST RESULTS

- Integrate with more than 40 security testing tools.
- Automatically consolidate, deduplicate, and correlate results from commercial and open-source application and network testing tools.
- Free up time for higher value security analysis.

PRIORITIZE RISK DECISIONS

- Measure, report, and make smart remediation decisions based on centralized data.
- Identify the most serious risks to your business using correlated views of application and infrastructure vulnerabilities.
- Easily provide management reports and support ad-hoc analysis.

THREADFIX REMEDIATION PROCESS

Manual tests
Code reviews penetration tests

Automated scans
SAST/DAST/IAST, software composition analysis, network, infrastructure

Normalize and dedupe
ThreadFix merges vulnerabilities.

Up to a 35% reduction in overall findings count.

Vulnerability analysis
Internal teams evaluate vulnerabilities.

False positives are persisted and remembered for future scans.

Bundling and communication
Teams sort vulnerabilities by type, severity, or custom options.

Up to a 44% reduction in mean time to remediation.

Vulnerabilities found by scanners are closed out the next time scans are imported, reflecting they are no longer present.

Manual close
Vulnerabilities originally found through manual tests are manually closed.

Status monitoring
Developer activity is monitored.

Defect tracking system
Development teams work within their own systems to resolve vulnerabilities.

Reporting
The unified ThreadFix platform provides access to reporting, analysis, and metrics. These reports can be automatically or manually shared.

Government, risk, and compliance systems

TRANSITION VULNERABILITIES

- Quickly spot vulnerability trends from centralized dashboards.
- Prioritize and send vulnerability data to defect trackers' ticketing systems.
- Track vulnerabilities to remediation in real time as developers fix defects.

INTEGRATIONS

ThreadFix integrates with more than 40 testing; government, risk, and compliance (GRC); and defect tracking tools, including:

- Checkmarx SAST
- Micro Focus Fortify and ALM
- IBM AppScan
- Qualys Cloud Platform
- Rapid7 InsightVM
- Tenable Nessus
- Veracode Dynamic and Static Analysis
- WhiteHat Security Sentinel
- Atlassian JIRA
- Microsoft Team Foundation Server

"ThreadFix has provided us a platform in which we can integrate disparate and incompatible tools that now work in harmony in our secure development lifecycle."

- STEVE SPRINGETT, APPLICATION SECURITY ENGINEER, PRODUCT SECURITY GROUP, AXWAY

C⬡ALFIRE.

About Coalfire

Leading cloud infrastructure providers, SaaS providers, and enterprises turn to Coalfire for help solving their toughest cybersecurity problems. Through the combination of extensive cloud expertise, technology, and innovative and holistic approaches, Coalfire empowers clients to achieve their business objectives, use security and compliance to their advantage, and fuel their continued success. Coalfire has been a cybersecurity thought leader for 20 years and has offices throughout the United States and Europe. For more information, visit **Coalfire.com.**
